Q35K. Below is a list of potential priorities for the legislature to address in the K-12 public education system in Texas. How important do you think it is for the Texas Legislature to address each of the following during the current legislative session? The treatment of students who are transgender.....223

Q35L. Below is a list of potential priorities for the legislature to address in the K-12 public education system in Texas. How important do you think it is for the Texas Legislature to address each of the following during the current legislative session? The role of religion in public schools225

Q36. And which of the following should be the legislature’s top priority for the K-12 public education system in Texas?.....227

Q37. Do you support or oppose using state funds to establish an educational savings account (ESA), voucher, or other “school choice” program in Texas?.....229

Q39. Thinking about legal immigration, do you think the United States allows too many people to immigrate here from other countries, too few, or about the right amount?.....231

Q40. As you may know, the 14th Amendment to the Constitution says that all children born in the United States are automatically U.S. citizens regardless of their parents' legal status. Would you favor or oppose changing the Constitution to REPEAL this part of the 14th Amendment?.....233

Q41. Do you agree or disagree with the following statement: Undocumented immigrants currently living in the United States should be deported immediately.....235

Q42A. More specifically, do you support or oppose each of the following....Separating children from their parents when the parents are detained for entering the country illegally.....237

Q42B. More specifically, do you support or oppose each of the following....Arresting people who are in the country illegally while they are at a hospital.....239

Q42C. More specifically, do you support or oppose each of the following....Arresting children who are in the country illegally while they are at school.....241

Q42D. More specifically, do you support or oppose each of the following....Arresting people who are in the country illegally while they are at church.....243

Q42E. More specifically, do you support or oppose each of the following....Deporting young people who were brought to the United States illegally as children, completed high school or military service, and have not been convicted of a violent crime.....245

Q42F. More specifically, do you support or oppose each of the following....Deporting immigrants who were allowed into the U.S. because of political persecution or safety concerns in their home countries.....247

Q43. Which of the following statements comes closest to your views on the origin and development of human beings?.....249

Methodology

Sampling and Weighting Methodology for the February 2025 Texas Statewide Study

For the survey, YouGov interviewed 1348 Texas registered voters between February 14 – February 24, 2025 who were then matched down to a sample of 1,200 to produce the final dataset. The respondents were matched to a sampling frame on gender, age, race, and education. The frame was constructed by using different subsets of a politically representative "modelled frame" of US adults, based upon the American Community Survey (ACS) public use microdata file, public voter file records, the 2020 Current Population Survey (CPS) Voting and Registration supplements, the 2020 National Election Pool (NEP) exit poll, and the 2020 CES surveys, including demographics and 2024 presidential vote.

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity and years of education. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles. The weights were then post-stratified on 2024 Presidential vote choice, and a four-way stratification of gender, age (4-categories), race (4-categories), and education (4-categories), to produce the final weight.

The margin of error is 2.83% for registered voters, and 3.22% accounting for the weighted data.

Survey Panel Data

The YouGov panel, a proprietary opt-in survey panel, is comprised of 1.5 million U.S. residents who have agreed to participate in YouGov Web surveys. At any given time, YouGov maintains a minimum of five recruitment campaigns based on salient current events.

Panel members are recruited by a number of methods and on a variety of topics to help ensure diversity in the panel population. Recruiting methods include Web advertising campaigns (public surveys), permission-based email campaigns, partner sponsored solicitations, telephone-to-Web recruitment (RDD based sampling), and mail-to-Web recruitment (Voter Registration Based Sampling).

The primary method of recruitment for the YouGov Panel is Web advertising campaigns that appear based on keyword searches. In practice, a search in Google may prompt an active YouGov advertisement soliciting opinion on the search topic. At the conclusion of the short survey respondents are invited to join the YouGov panel in order to receive and participate in additional surveys. After a double opt-in procedure, where respondents must confirm their consent by responding to an email, the database checks to ensure the newly recruited panelist is in fact new and that the address information provided is valid.

The YouGov panel currently has over 20,000 active panelists who are residents of Texas. These panelists cover a wide range of demographic characteristics.

Sampling and Sample Matching

University of Texas / Texas Politics Project Poll
February 2025 Texas Statewide Survey Crosstabs

Sample matching is a methodology for selection of “representative” samples from non-randomly selected pools of respondents. It is ideally suited for Web access panels, but could also be used for other types of surveys, such as phone surveys. Sample matching starts with an enumeration of the target population. For general population studies, the target population is all adults, and can be enumerated through the use of the decennial Census or a high-quality survey, such as the American Community Survey. In other contexts, this is known as the sampling frame, though, unlike conventional sampling, the sample is not drawn from the frame. Traditional sampling, then, selects individuals from the sampling frame at random for participation in the study. This may not be feasible or economical as the contact information, especially email addresses, is not available for all individuals in the frame and refusals to participate increase the costs of sampling in this way.

Sample selection using the matching methodology is a two-stage process. First, a random sample is drawn from the target population. We call this sample the target sample. Details on how the target sample is drawn are provided below, but the essential idea is that this sample is a true probability sample and thus representative of the frame from which it was drawn.

Second, for each member of the target sample, we select one or more matching members from our pool of opt-in respondents. This is called the matched sample. Matching is accomplished using a large set of variables that are available in consumer and voter databases for both the target population and the opt-in panel.

The purpose of matching is to find an available respondent who is as similar as possible to the selected member of the target sample. The result is a sample of respondents who have the same measured characteristics as the target sample. Under certain conditions, described below, the matched sample will have similar properties to a true random sample. That is, the matched sample mimics the characteristics of the target sample.

When choosing the matched sample, it is necessary to find the closest matching respondent in the panel of opt-ins to each member of the target sample. YouGov employs the proximity matching method to find the closest matching respondent. For each variable used for matching, we define a distance function, $d(x,y)$, which describes how “close” the values x and y are on a particular attribute. The overall distance between a member of the target sample and a member of the panel is a weighted sum of the individual distance functions on each attribute. The weights can be adjusted for each study based upon which variables are thought to be important for that study, though, for the most part, we have not found the matching procedure to be sensitive to small adjustments of the weights. A large weight, on the other hand, forces the algorithm toward an exact match on that dimension.

Interest and Engagement

Q2. Generally speaking, would you say that you are extremely interested in politics and public affairs, somewhat interested, not very interested, or not at all interested?

Q43. Which of the following statements comes closest to your views on the origin and development of human beings?

	Human beings have developed over millions of years from less advanced forms of life, but God guided the process.	Human beings have developed over millions of years from less advanced forms of life, and God had no part in the process.	God created human beings pretty much in their present form about 10,000 years ago.	Don't know/No opinion
