Project Code: UTEX0069d
Project Name: Texas Tribune
Prepared for: Josh Blank
Interviews: 1200
Field Period: August 05, 2026 – August 13, 2026
Project Manager: Nour Abboud Frank

=====

YouGov interviewed 1218 registered voters from Texas who were then matched down to a sample of 1200 to produce the final dataset. The respondents were matched to a sampling frame on gender, age, race, and education. The frame was constructed by stratified sampling from a Texas subset of the 2023 American Community Survey (ACS) 1-year sample with selection within strata by weighted sampling with replacements (using the person weights on the public use file).

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, and home ownership. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2024 presidential vote choice, a four-way stratification of gender, age (4-categories), race (4-categories), and education (4-categories), and a two-way stratification of race (4-categories), and education (4-categories), to produce the final weight.
