YouGov interviewed 1394 respondents who were then matched down to a
sample of 1200 to produce the final dataset. The respondents were
matched to a sampling frame on gender, age, race, education, party
identification, ideology, and political interest. The frame was
constructed by stratified sampling from the full 2012 American
Community Survey (ACS) sample with selection within strata by weighted
sampling with replacements (using the person weights on the public use
file). Data on voter registration status and turnout were matched
to this frame using the November 2012 Current Population Survey.
Data on interest in politics and party identification were then
matched to this frame from the 2007 Pew Religious Life Survey.

The matched cases were weighted to a sampling frame of Texas registered
voters using propensity scores. The matched cases and the frame were
combined and a logistic regression was estimated for inclusion in the
frame. The propensity score function included age, gender, race/ethnicity,
years of education, and ideology. The propensity scores were grouped
into deciles of the estimated propensity score in the frame and
post-stratified according to these deciles.

Variable List

```
================================================================
```

Name	Description
caseid	Case ID
weight	Case weight
zipcode	Zip code
race	Race
hispanic	Hispanic
langpref	English or Spanish
Q1	Texas votereg
