

## Texas Statewide Survey

Field Dates: June 16-24, 2022

N=1200 Registered Voters.

Margin of error: +/- 2.83% for Registered voter sample.<sup>1</sup>

### Interest and Engagement

Q1. Are you registered to vote in the state of Texas?

Q1	Percent
Yes, registered	100

Q2. Generally speaking, would you say that you are extremely interested in politics and public affairs, somewhat interested, not very interested, or not at all interested?

Q2	Percent
Extremely interested	43
Somewhat interested	42
Not very interested	10
Not at all interested	4
Don't know	0

Q3. There are many elections in the state of Texas. Furthermore, many people intend to vote in a given election, but sometimes personal and professional circumstances keep them from the polls. Thinking back over the past two or three years, would you say that you voted in all elections, almost all, about half, one or two, or none at all?

Q3	Percent
Every election	36
Almost every election	39
About half	10
One or two	9
None	5
Don't know	2

Q3A. How enthusiastic would you say you are about voting in the November 2022 election?

Q3A	Percent
Extremely enthusiastic	44
Very enthusiastic	22
Somewhat enthusiastic	16
Not too enthusiastic	9
Not at all enthusiastic	6
Don't know/Unsure	2

<sup>1</sup> In calculating the margin of error (MOE) for the survey, we provide two calculations, one that compensates for the relative standard deviation of the weights and one that does not. Without taking the variance of the weights into account, the margin of error for the full sample is 2.83%. To compensate for the additional uncertainty from weighting, we apply a multiplier derived from the coefficient of variation of the weights:  $\sqrt{1+CV^2}$ , where  $CV=sd(weights)/mean(weights)$ . For this weight sensitive calculation, the MOE for the full sample is 3.10%.

### Most Important Problem

Q4. What would you say is the most important problem facing this country today? [Randomize]

Q4	Percent
Inflation/Rising prices	20
The economy	14
Political corruption/leadership	9
Gun control/gun violence	7
Gas prices	7
Environment/Climate change	5
Border security	4
Moral decline	4
Voting rights	3
Partisan gridlock	2
Immigration	2
Health care	2
Abortion	2
Federal spending/national debt	2
Crime	2
Coronavirus/COVID-19	2
Income inequality	2
Housing	1
The media	1
China	1
Taxes	1
Russia	1
Energy	1
National security/terrorism	1
Education	1
Electoral fraud	1
Race relations	1
Police brutality/police militarization	0
Homelessness	0
Afghanistan	0
Redistricting	0
North Korea	0
Sexual harassment	0
Social welfare programs	0
Unemployment/jobs	0

## Texas Statewide Survey

Q5. What would you say is the most important problem facing the State of Texas today? [Randomize]

Q5	Percent
Border security	14
Inflation/Rising prices	12
Immigration	11
Political corruption/leadership	11
Gun control/gun violence	10
Gas prices	7
The economy	6
Abortion	4
Environment/Climate change	3
Voting rights	2
Moral decline	2
Oil prices	2
Health care	2
Energy/The grid	2
Crime	2
Housing	1
Race relations	1
Coronavirus/COVID-19	1
Unemployment/jobs	1
Taxes	1
Homelessness	1
Redistricting	1
Education	1
Police misconduct	1
Property rights	0
Social welfare programs	0
State budget cuts	0
The media	0
Transportation/roads/traffic	0
Pension funding	0
Utility rates	0
Electoral fraud	0
Water supply	0

LOCATE. Would you say that you live in an urban, suburban, or rural community?

LOCATE	Percent
Urban	30
Suburban	52
Rural	19

METRO. Do you live in the Houston, Dallas-Fort Worth, San Antonio, or Austin metropolitan areas?

METRO	Percent
Yes, I live in the Houston area	22
Yes, I live the Dallas-Fort Worth area	24
Yes, I live in the San Antonio area	11
Yes, I live in the Austin area	9
No, I live in another part of Texas	33

CHILD. How many children are currently living with you?

CHILD	Percent
One	17
Two	10
Three	6
Four or more	2
None	65

SCHOOL. Do you have any children currently enrolled in school in Texas? (check all that apply)

Item	Percent
Yes, I have a child/children under 18 enrolled in public school in Texas.	19
Yes, I have a child/children under 18 enrolled in private school in Texas.	4
Yes, I have a child/children under 18 who are being home schooled in Texas.	2
No, I do not have any children under 18 in school in Texas.	76

P20. In the 2020 presidential election, who did you vote for?

presvote20post	Percent
Did not vote for President	10
Donald Trump	46
Howie Hawkins	0
Jo Jorgensen	1
Joe Biden	42
Other	1

### Sampling and Weighting Methodology for the June 2022 Texas Statewide Study

For the survey, YouGov interviewed 1,359 Texas registered voters between June 16 - 24, 2022 who were then matched down to a sample of 1,200 to produce the final dataset. The respondents were matched on gender, age, race, and education. YouGov then weighted the matched set of survey respondents to known characteristics of registered voters of Texas from the 2020 Current Population survey and 2014 Pew Religious Landscape Survey

The respondents were matched to a sampling frame on gender, age, race, and education. The frame was constructed by stratified sampling from the full 2020 Current Population Survey (CPS) voter registration supplement with selection within strata by weighted sampling with replacements (using the person weights on the public use file). For the main sample, the matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, and years of education. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles. These weights were then post-stratified on baseline party identification, the 2020 and 2016 presidential vote, ideology, and a full stratification of four-category age, four-category race, gender, and four-category education. The weights were trimmed at 7 and normalized to sum to the sample size.

The margin of error of the weighted data for registered voters is 2.83% for registered voters and 3.3% for the weighted data.

### Survey Panel Data

The YouGov panel, a proprietary opt-in survey panel, is comprised of 1.5 million U.S. residents who have agreed to participate in YouGov Web surveys. At any given time, YouGov maintains a minimum of five recruitment campaigns based on salient current events.

Panel members are recruited by a number of methods and on a variety of topics to help ensure diversity in the panel population. Recruiting methods include Web advertising campaigns (public surveys), permission-based email campaigns, partner sponsored solicitations, telephone-to-Web recruitment (RDD based sampling), and mail-to-Web recruitment (Voter Registration Based Sampling).

The primary method of recruitment for the YouGov Panel is Web advertising campaigns that appear based on keyword searches. In practice, a search in Google may prompt an active YouGov advertisement soliciting opinion on the search topic. At the conclusion of the short survey respondents are invited to join the YouGov panel in order to receive and participate in additional surveys. After a double opt-in procedure, where respondents must confirm their consent by responding to an email, the database checks to ensure the newly recruited panelist is in fact new and that the address information provided is valid.

The YouGov panel currently has over 20,000 active panelists who are residents of Texas. These panelists cover a wide range of demographic characteristics.

### Sampling and Sample Matching

Sample matching is a methodology for selection of "representative" samples from non-randomly selected pools of respondents. It is ideally suited for Web access panels, but could also be used for other types of surveys, such as phone surveys. Sample matching starts with an enumeration of the target population. For general population studies, the target population is all adults, and can be enumerated through the use of the decennial Census or a high-quality survey, such as the American Community Survey. In other contexts, this is known as the sampling frame, though, unlike conventional sampling, the sample is not drawn from the frame. Traditional sampling, then, selects individuals from the sampling frame at random for participation in the study. This may not be feasible or economical as the contact information, especially email addresses, is not available for all individuals in the frame and refusals to participate increase the costs of sampling in this way.

Sample selection using the matching methodology is a two-stage process. First, a random sample is drawn from the target population. We call this sample the target sample. Details on how the target sample is drawn are provided below, but the essential idea is that this sample is a true probability sample and thus representative of the frame from which it was drawn.

Second, for each member of the target sample, we select one or more matching members from our pool of opt-in respondents. This is called the matched sample. Matching is accomplished using a large set of variables that are available in consumer and voter databases for both the target population and the opt-in panel.

The purpose of matching is to find an available respondent who is as similar as possible to the selected member of the target sample. The result is a sample of respondents who have the same measured characteristics as the target sample. Under certain conditions, described below, the matched

## Texas Statewide Survey

sample will have similar properties to a true random sample. That is, the matched sample mimics the characteristics of the target sample.

When choosing the matched sample, it is necessary to find the closest matching respondent in the panel of opt-ins to each member of the target sample. YouGov employs the proximity matching method to find the closest matching respondent. For each variable used for matching, we define a distance function,  $d(x,y)$ , which describes how “close” the values  $x$  and  $y$  are on a particular attribute. The overall distance between a member of the target sample and a member of the panel is a weighted sum of the individual distance functions on each attribute. The weights can be adjusted for each study based upon which variables are thought to be important for that study, though, for the most part, we have not found the matching procedure to be sensitive to small adjustments of the weights. A large weight, on the other hand, forces the algorithm toward an exact match on that dimension.
