Project Code: UTEX0031a
Project Name: Texas Tribune Feb 2017
Prepared for: Jim Henson
Interviews: 1200
Field Period: Feb 3-10, 2017
Project Manager: Sam Luks - 650.462.8009
================================================================================
```

YouGov interviewed 1280 registered voters in Texas who were then matched down
to a sample of 1200 to produce the final dataset. The respondents were matched
to a sampling frame on gender, age, race, education, party identification, and
ideology. The frame was constructed by stratified sampling from the full 2012
American Community Survey (ACS) sample with selection within strata by weighted
sampling with replacements (using the person weights on the public use file).
Data on voter registration status and turnout were matched to this frame using
the November 2012 Current Population Survey. Data on interest in politics and
party identification were then matched to this frame from YouGov's own
estimates based on pooled media polls. The matched cases were weighted to the
sampling frame using propensity scores. The matched cases and the frame were
combined and a logistic regression was estimated for inclusion in the frame.
The propensity score function included age, gender, race/ethnicity, years of
education, and ideology. The propensity scores were grouped into deciles of
the estimated propensity score in the frame and post-stratified according to
these deciles. The propensity scores were then post-stratified to the
estimated distribution of party identifiers, and on a full stratification of
four category race, four category age, gender, and four category education.
The resulting weights were trimmed at 7 and recentered to a mean on one.
